Programming	**Competent:** Python, Javascript, HTML5, CSS
	Learning: PHP, SQL
OS	**Proficient:** Mac, Windows
	Learning: Debian
OTHER	**Proficient:** Wordpress, Elementor

Other Projects

Software Development:
I have developed some games from scratch in order to sharpen my skills in Javascript, CSS, HTML and other programming languages and tools. Find more [here](#).

AI creations:
As an AI enthusiast I'm giving a lot of time to develop my skills and my understanding on this subject. The past few months I started building my own tools using servers with PostgreSQL, FastAPI and Debian OS. Find more on my [Github](#).

Soft Skills & Extras

Human Interaction: Having worked as a trainer and a manager I have come across difficult situations with people. I have learned how to handle situations like this where emotions overcome logical thinking.

Decision making: Being able to judge quickly and make the best decision possible with little or no room to think has been my life for the last 3 years. Working hands on, day in , day out I have mastered that skill to the fullest.

Focus: I have developed the skill to not crumble under pressure or work load, one step at a time and well organised work will get you to the finish line quicker.

Travelling: I have a passion for exploring the world. That's why every time I have the chance to take a trip abroad, expand my knowledge of the world, the communities, the cultures, I'll do it. Having met lots of different people from lots of different countries and cultures during my travels fueled this passion even more, and helped me develop the skill of quickly adapting to each situation.
